

Advanced Clinical Research Services Enhances Biostatistics Offering

Appoints Senior Statistician Patricia Wozniak to Head Department

Bannockburn, IL, December 10, 2007 -- Advanced Clinical Research Services LLC (ACRS), a contract research organization serving pharmaceutical and biotechnology companies, today announced the appointment of Patricia J. Wozniak, Ph.D., as Director, Statistical Programming. Dr. Wozniak will supervise Statistical Programming for the company.

ACRS facilitates successful clinical trials by developing and implementing the collection, management, analysis and reporting of clinical data to companies performing clinical trials to meet regulatory submission requirements for the U.S. Food and Drug Administration and other global agencies.

Dr. Wozniak comes to ACRS after thirteen years with Abbott Laboratories where she began her career as a Statistical Consultant and served most recently as Associate Director of Statistics for Abbott's Global Pharmaceutical Research and Development group.

“Patricia Wozniak brings to ACRS expertise and experience that will enable us to greatly enhance the value and efficiency of our Biostatistics offering,” said Leo Sheridan, president and CEO of ACRS. “We are already esteemed for our ability to develop and review protocols and reports, conduct statistical analysis and provide estimates of sample size, among the many functions critical to successful clinical trials. Now we will have the internal expertise necessary to program tables, lists, and figures, providing additional value-added services to an already efficient and time-saving operation.”

In addition, ACRS has added William Conover, M.S., to the company statistical programming initiative. Mr. Conover enters the position with over 9 years as a Clinical Statistician, working for many of the top pharmaceutical companies in the Chicago area.

About ACRS

ACRS is a technology-enabled and quality-driven contract research organization (CRO) that provides clinical data management, biostatistics, and medical writing services to pharmaceutical and biotechnology companies.

ACRS is differentiated from other organizations that provide similar services in that it develops and implements technologically-based products, services, and processes that ensure clinical trial data is collected, managed, analyzed, and reported with the highest level of accuracy and efficiency. As a result of this model, clients are able to reduce the time to receiving a locked database and final report by months.
